

The background of the slide is a dark, semi-transparent collage. It features several financial charts, including candlestick and line graphs with various indicators. A large, glowing lightbulb is positioned in the center, symbolizing ideas and innovation. There are also smaller data dashboards with gauges showing percentages like 25%, 50%, and 75%, and some text-based data displays. The overall aesthetic is high-tech and data-driven.

GLOBAL FOOTPRINT & MANUFACTURING EXCELLENCE

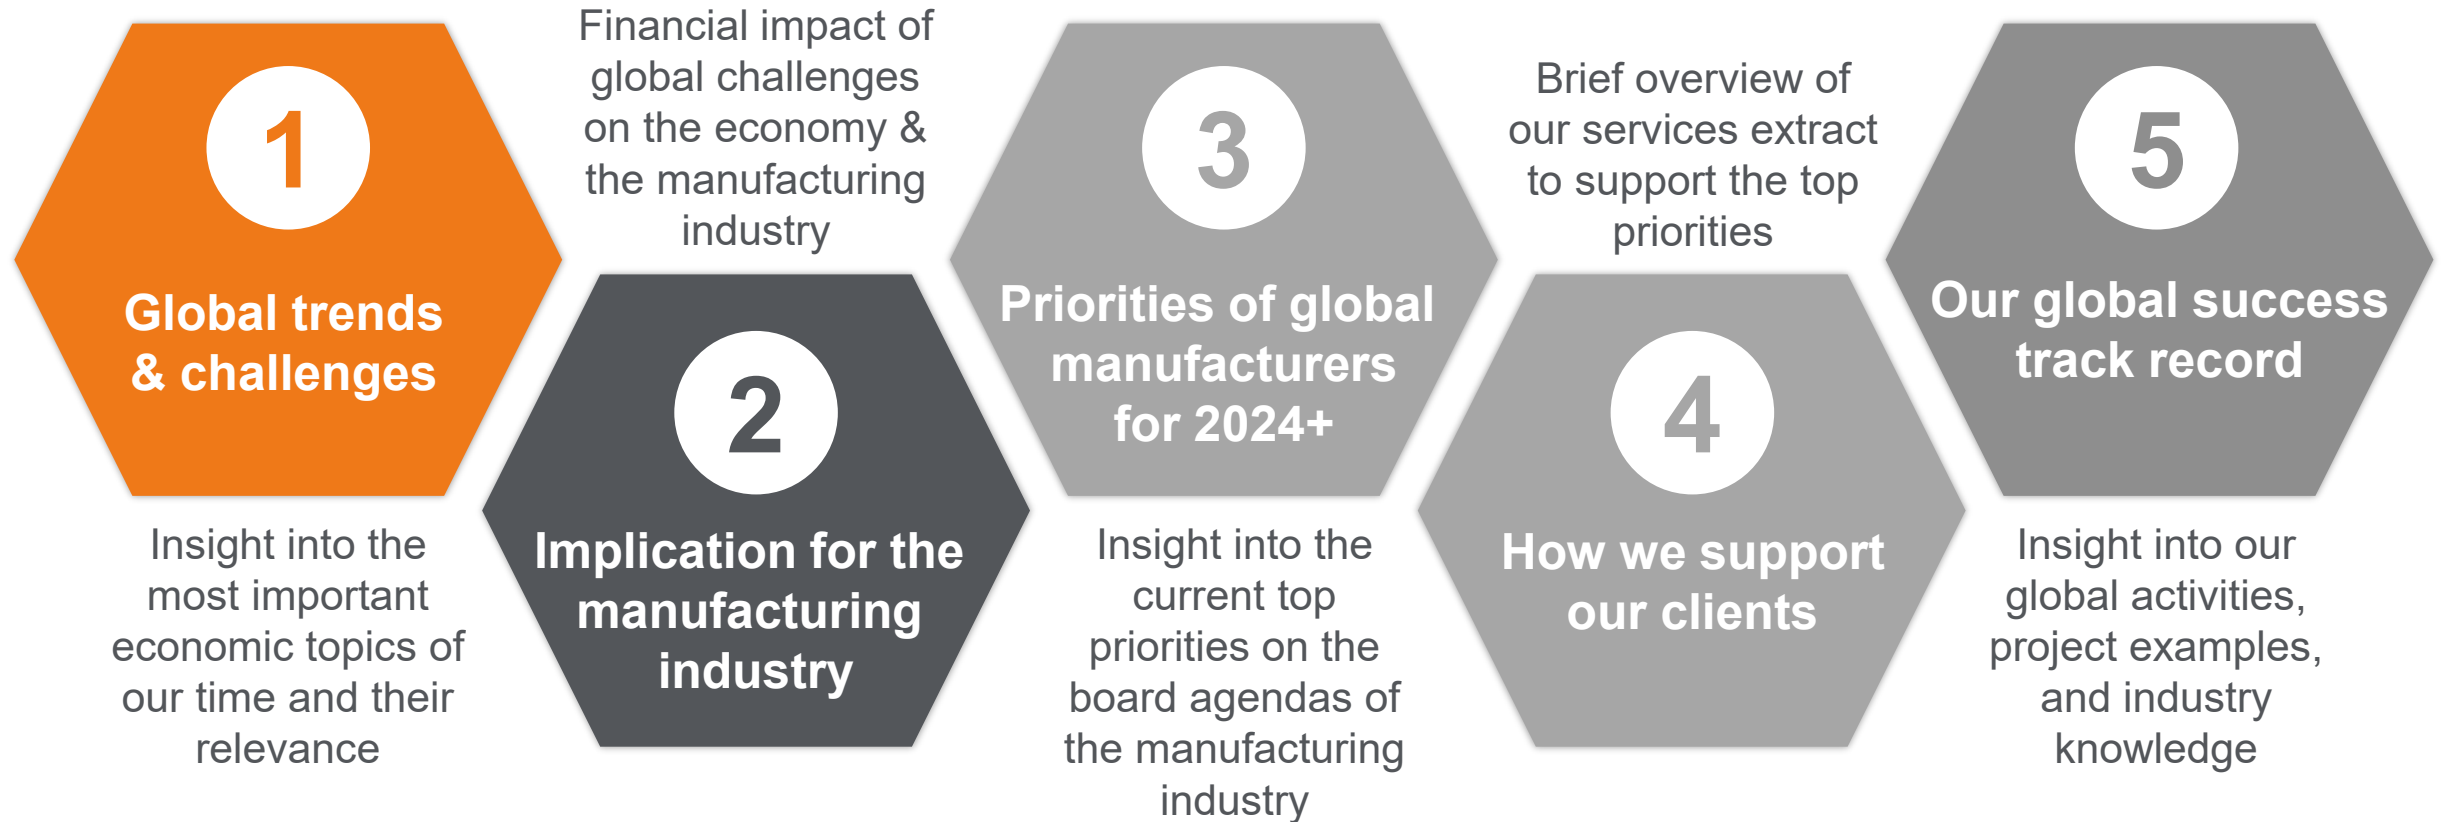

From production strategy and manufacturing footprint to factory planning, ramp-up, and industrialization

EFESO
MANAGEMENT CONSULTANTS

DIGITAL TRANSFORMATION &
MANUFACTURING

INSIGHT

Overview

Regional endeavours all over the globe to strengthen local economy, create a world of geopolitical isolation

Americas

China 301 Tariffs

... increase in tariffs on selected imported goods from China to the US.

Inflation Reduction Act (IRA)

... tax refunds & subsidies for climate friendly technologies & projects with a total amount of \$433bn.

Uyghur Forced Labor Prevention Act

... import ban on goods from the province of Xinjiang (CN) assuming they have been produced in forced labor.

Europe

European Climate Law

... to gain net zero greenhouse gas emissions in the EU by 2050 by defining rules for all economic sectors.

Supply Chain Due Diligence Act

... to identify, prevent or minimize risks of human rights violations & damage to environment.

Net-Zero Industry Act

... aims to enhance European manufacturing capacity for net-zero technologies and their key components.

Asia, incl. ME

New Energy Vehicle Subsidy Act

... financial incentives for purchasing electric and hybrid vehicles and subsidies for local EV manufacturing network.

Foreign Investment Law

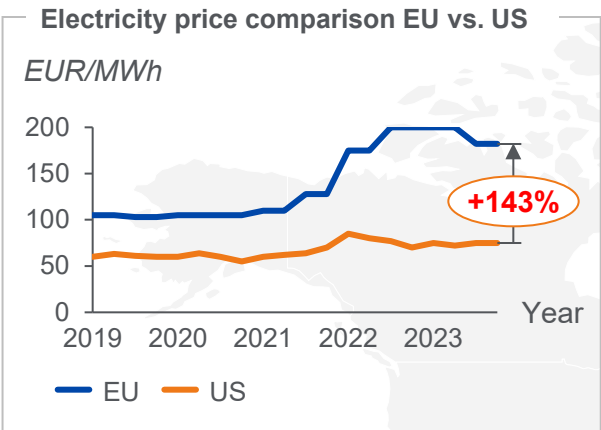

... governing foreign direct investment including a 'negative list' with sectors not allowed to invest in.

Anti-Foreign Sanctions Law

... to counteract foreign sanctions on entities or individuals who participate in sanctions against CN.

The three major blocs are strongly interwoven economically which complicates the process of seeking manufacturing excellence

Energy cost is putting pressure on companies to rethink their footprint if not already in the US

Export of tariff-impacted Asian products is no longer economically reasonable

Carbon price development has big impact on further purchasing strategies

Given the increasing trend of regional bloc-building and geopolitical isolation, manufacturers should focus on the following for 2024 and beyond

Focus for 2024+	Details
 Adaptation to regional regulations	Manufacturers must navigate varying regional policies like the IRA in the Americas, CO ₂ pricing in Europe, and the RCEP in Asia. Adapting is critical to maintaining market access and compliance.
 Supply chain resilience	With export restrictions, such as initiatives like the CHIPS and Science Act in the Americas, manufacturers need to build resilient supply chains that can withstand disruptions and policy changes.
 Strategic location planning	Conduct location checks to ensure that manufacturing and R&D operations are optimized for regional benefits, considering local incentives, tariffs, and trade agreements.
 Technological investment	Focus on investing in key technologies and complying with region-specific laws, such as European Chip Law and the Connected Vehicles Investigation in Americas, to remain competitive and future-proof.
 Sustainability and energy transition	Prioritize sustainability initiatives and energy security, especially in regions like Europe where energy transition is a key focus, to meet regulatory demands and consumer expectations.
 Market localization	Address the unequal support for foreign versus local companies, particularly in Asia, by tailoring strategies to local markets and strengthening relationships with local authorities and partners.

The overarching question that needs to be answered is how market challenges and needs can be reconciled with an optimized global production network

? Guiding question as task definition

- Where will the **sales markets** be in the future and is the **production network set up correctly**?
- **Where** should which **products be produced** for the sales markets?
- **What role** does each of the **plants** have to play in the **global network**?
- What is the **right dimensioning for a plant** and how is this achieved?
- How will the **plant** and the **building** be **designed and built**?
- How is the **construction secured** and managed in terms of **time, budget and quality**?
- How should the plant be **operated** and how can **industrialization** and **ramp-up** be achieved?

?✓ Our approach as an answer

Strategy & footprint

360° strategic view on manufacturing network

Plant concept

Factory, location, and business case definition

Factory planning

Specialized on manufacturing plants, infrastructure, and distribution centers

Realization supervision

Construction, site and transfer supervision of realization phase

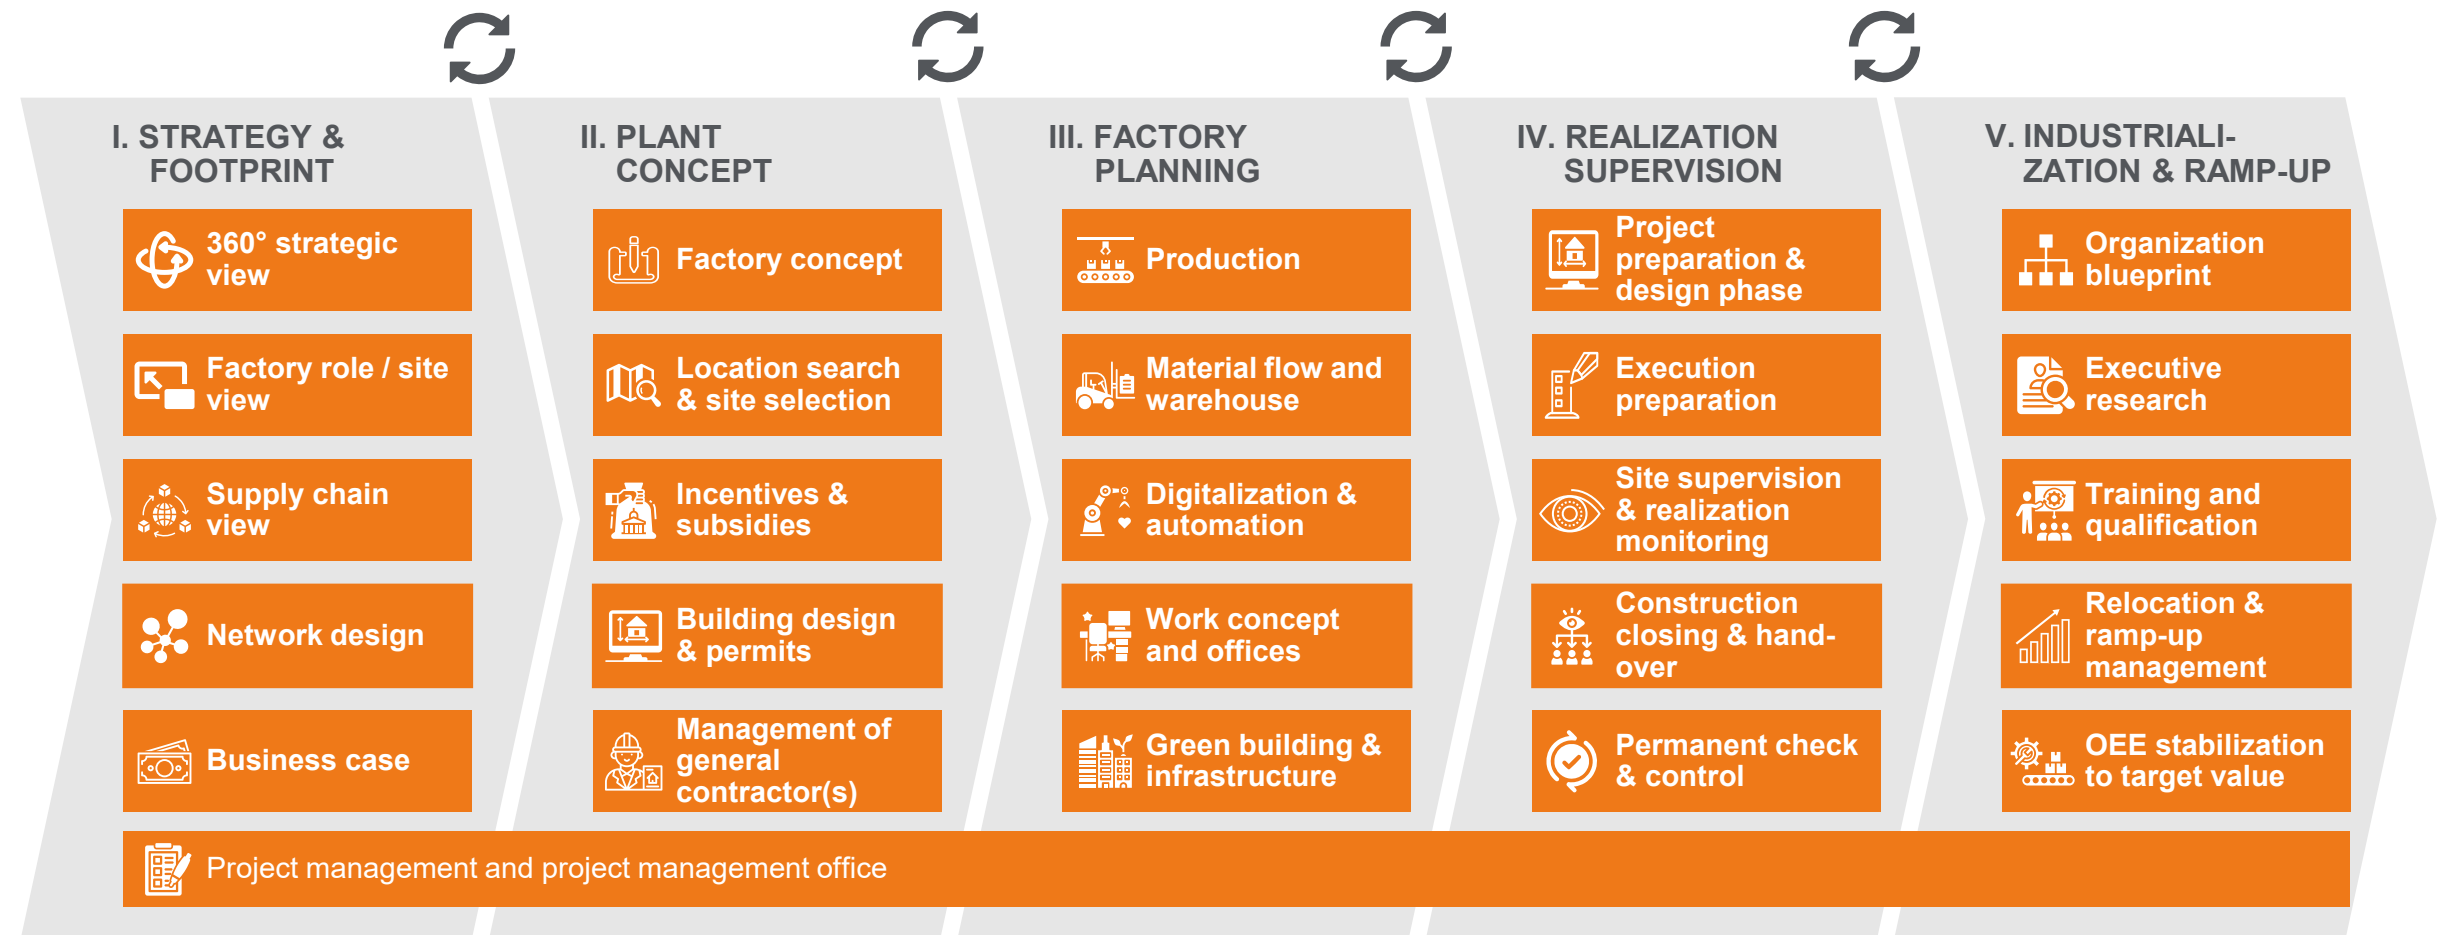

Ramp-up & industrialization

PMO relocation, set-up of new operations, and secure SOP targets

We have bundled, and expanded, our capabilities so that we can provide our customers with the best possible support, all the way from initial ideation to SOP

EFESO's 'one-stop shop' operations capabilities and service offerings*

Topics are cross-phase and are only assigned for rough indication

*We support our customers holistically or in every phase in which our customer currently finds himself
OEE = Overall Equipment Effectiveness

In the last few years alone, numerous successful programs across multiple manufacturing sectors have been delivered, incl. for automotive OEMs and Tier-X

Experience within footprint strategy, production optimization, factory planning, and set up of new plants

USA

- Animal nutrition manufacturer
- Manufacturer of prefabricated houses
- Leading packaging manufacturer
- Water treatment chemical producer
- Leading pharmaceutical distributor
- Fast-growing biotech company

Canada

- Alkali chemical manufacturer
- Aircraft assembly, Brazilian based
- Pet Food Manufacturer

Mexico

- Leading manufacturer of window shades, USA based
- Worlds largest brewery
- Server controls / connectors manufacturer, USA based

United Arab Emirates

- Leading Aerospace & Defense company
- Packaging manufacturer

Czech Republic

- Leading crane producer
- Leading high-tech electr.
- Leading machine producer

Poland

- 1st tier aerospace supplier
- Leading household products
- Leading heat pump supplier

Romania

- 1st and 2nd tier automotive
- 1st tier supplier aerospace
- Pharma producer

Hungary

- 1st tier automotive suppliers
- Leading chemicals producers
- Leading high-tech electronics

Germany

- Leading heat pump producer
- 1st and 2nd tier automotive supplier
- Leading sanitary goods producer

Switzerland

- Leading pharma packaging manufacturer
- Leading F&B packaging manufacturer

Austria

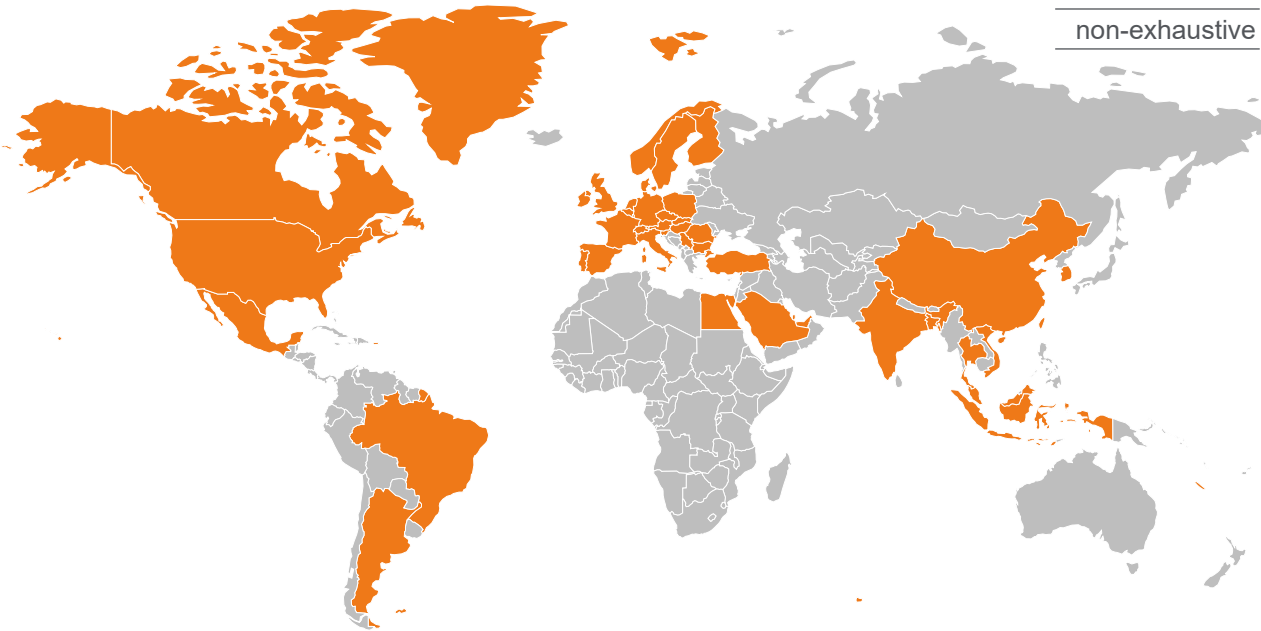

- Special vehicle manufacturer
- Railway equipment manufacturer
- Head pumps & systems manufacturer

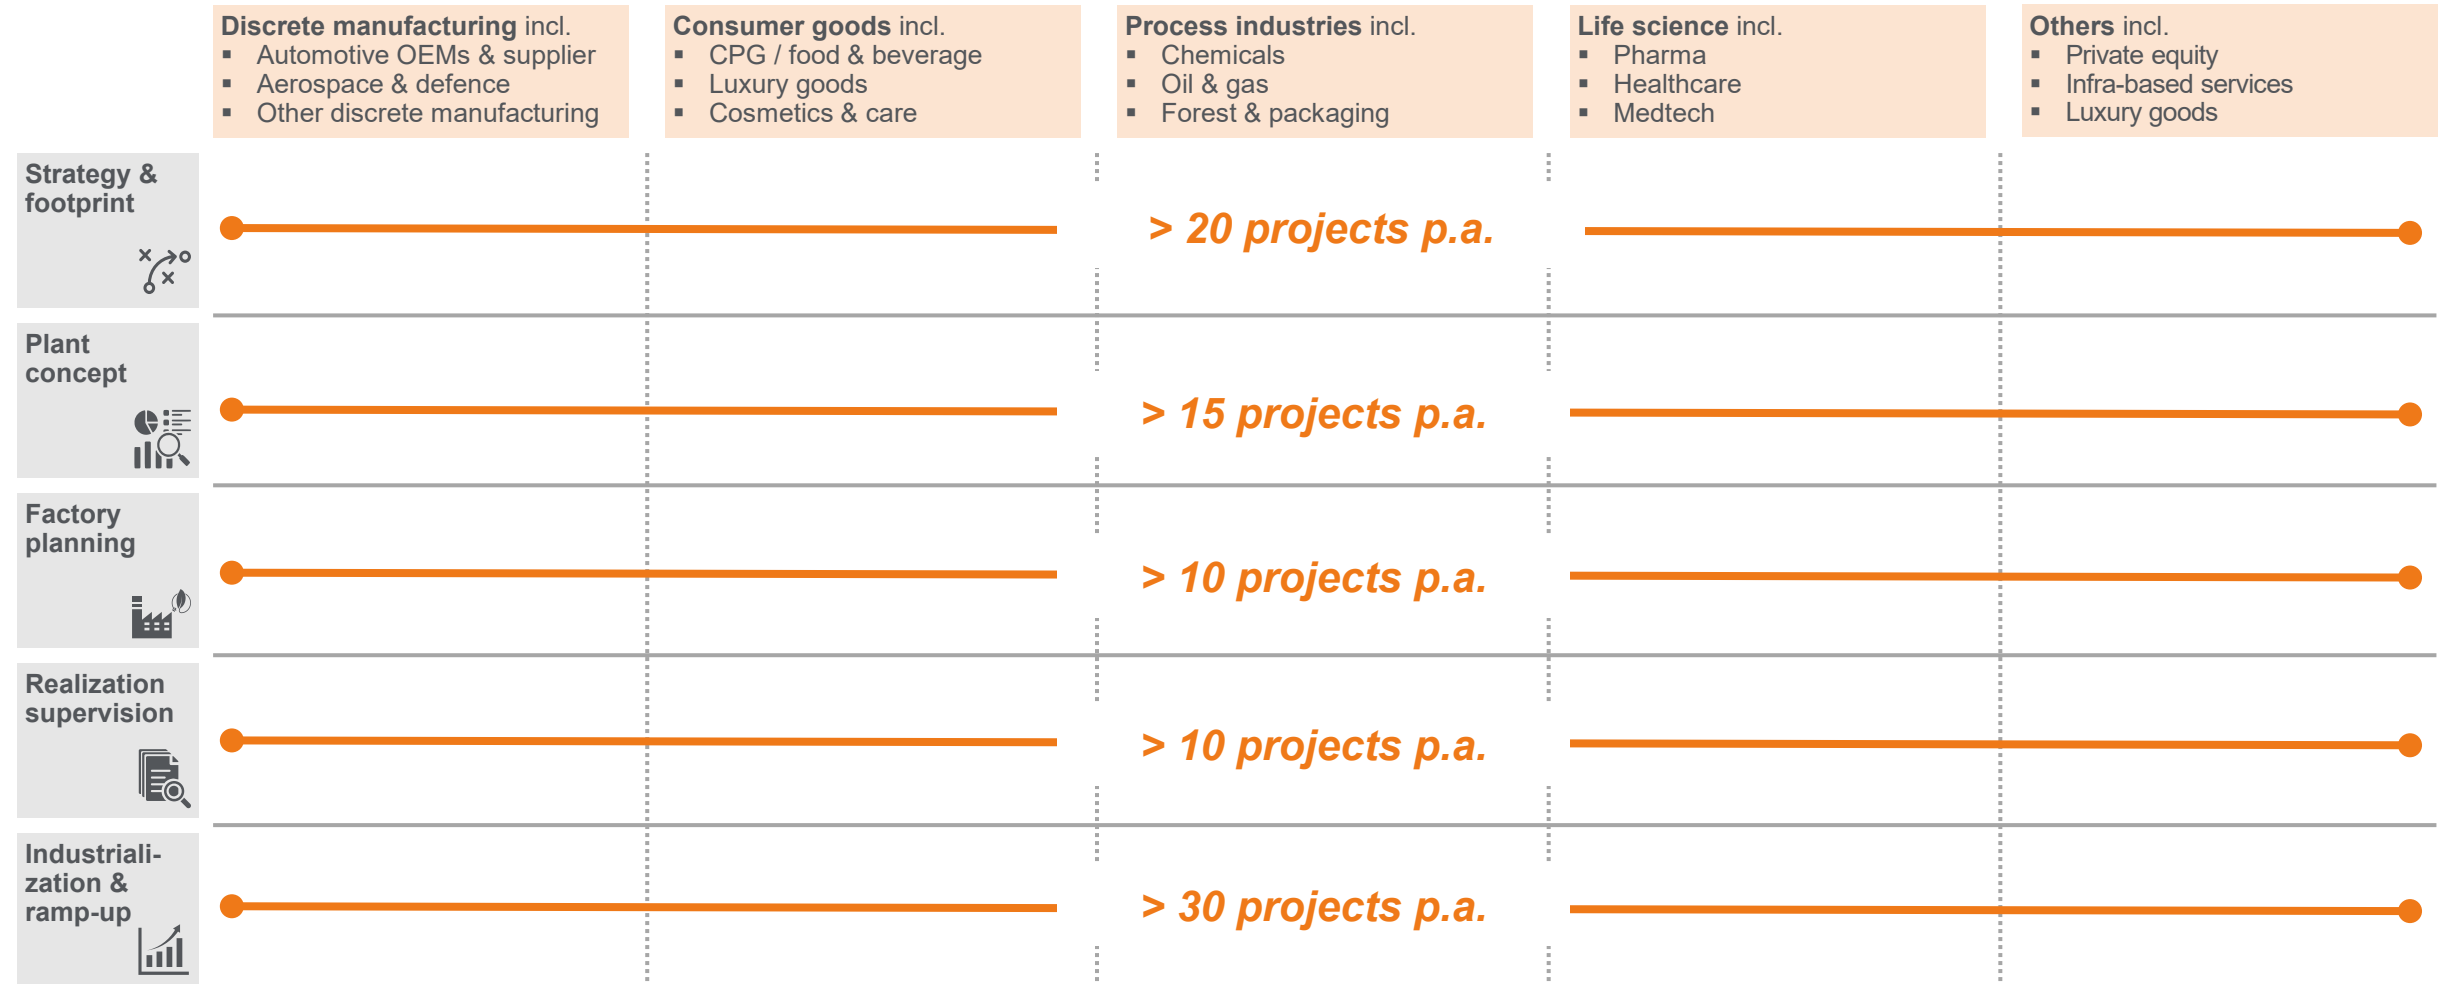

Italy

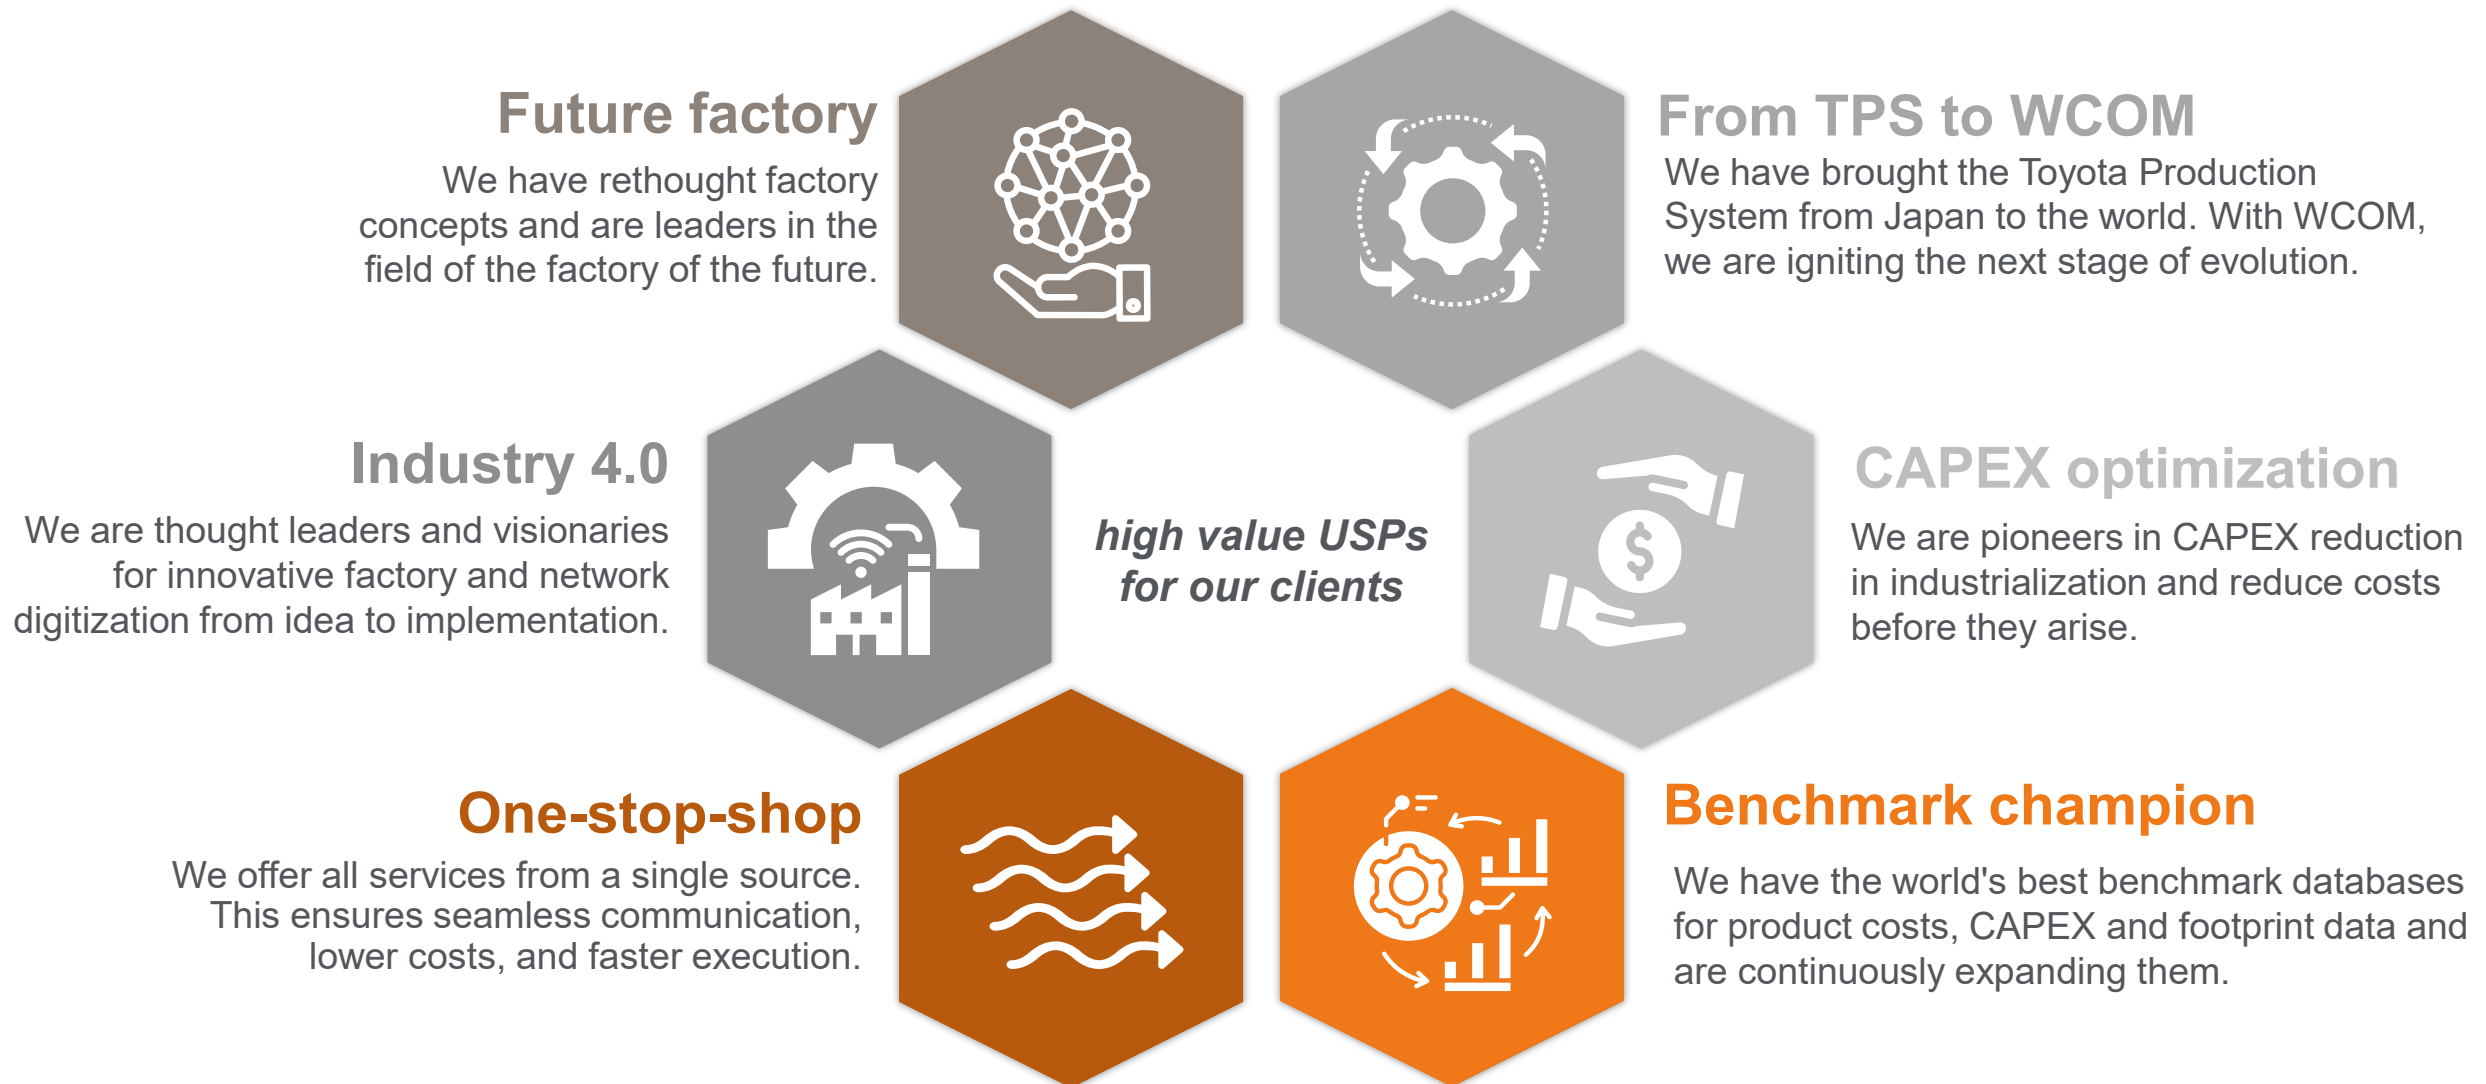

- Luxury OEM manufacturer
- 1st and 2nd tier automotive supplier
- Agricultural machinery producer

We have gained in-depth experience across all major manufacturing sectors through successfully delivered projects covering all aspects of our service offering

EFESO is one of the world's leading 'pure play' consulting firms in industrial operations and performance improvement with high value USPs for our clients

We have a proven track record across all manufacturing industries around the globe

EXCERPT

STRATEGY & FOOTPRINT

Redesign European production network for a FMCG client

- Simulation of scenarios
- Re-allocation of products
- 32 m€ (18%) cost reduction

From regionals to a global network for a glass manufacturer

- Organizational restructuring acc. to target global network
- 59 m€ (40%) cost reduction
- 14% utilization improvement

Optimized global operations footprint for a FMCG producer

- 23% reduction in OPEX
- 31% global stock reduction
- Improved inventory mgmt. and freeing up capital

PLANT CONCEPT

Site selection and Masterplan for an electronic components plant

- State-of-art site concept increases efficiency of production & material flows
- Concept w/ flexible expansion options and modular units

Site selection & plant concept for an electronics plant in CEE

- State-of-art SMD production
- Validation of cost saving potential by 20% vs. act. plant
- Subsidies strategy defined

Footprint, site selection & masterplan for medical tech comp.

- Assessment of footprint and definition of production scope for EEU plant
- Modular layout concept with large flexibility for expansions

FACTORY PLANNING

Plant structure planning for merging of several locations

- Optimization of material flows as well as log. & indirect areas
- Overall PM incl. CAPEX and realization roadmap

Holistic planning of a site in HU for a turbine blades manufacturer

- Scope of relocation defined
- Efficient production and logistics concept worked out
- Project plan for realization

Factory planning & realization for injection molded high-quality parts

- Plant & building concept
- Tender specification and contractor management
- Project management for construction supervision

REALIZATION SUPERVISION

Building planning & realization support for a packaging plant

- Interdisciplinary general planning, provision of works results over all planning & architectural disciplines
- DC > 8.000 pallet spaces

Building Planning & Realization supervision of aircraft parts plant

- Flexible and modular concept with expansion potential
- Supervision of construction works and infrastructure

Developer selection, Building planning & Realization supervision

- Sites & developer selection
- Building and infrastructure concept over all disciplines
- Site supervision

INDUSTRIALIZATION & RAMP-UP

Ramp-up support and PMO for set-up new plant in CEE

- Reaching planned project timeline within 12 months
- Compliance with project targets (budget, timing, quality)

Ramp-up management and OEE stabilization for a gearbox plant

- Improvement of productivity and cycle time
- Installation and lead of 7 work packages to stabilize organization
- Implementation of measures

Cost-efficient ramp-up of eMobility transformation in production

- Improvement of Production KPI – OEE, Scrap, Cycle Time
- Reduction of CAPEX and Assembly Costs
- Integration of existing footprint and processes
